

How To Choose The Best Rain Gutters For Your Home

If you are like most homeowners you don't give much thought on gutters and downspouts, but they certainly play an important role in the upkeep of your home.

Leaking rain gutters can cause a wide array of problems, from just an inconvenience of getting wet from them dripping on your head, to major damage with water leaking into your basement or rotting the wood on your roof and siding.

So, if you're looking to replace your guttering system, the big question is what type of gutters are the best? Let's look at the various types you have to choose from.

Steel Gutters

If you are looking for strength a steel guttering system is your choice here. Steel holds up to the elements better than any other type of gutters. They will basically last forever. The one major drawback with steel is that it can rust over time unless you treat them.

Copper Gutters

The durability and visual appeal make copper gutters an excellent choice for your home. They are easy to maintain and hold up to rain water very well. The major drawback with copper is that it can discolor over the years. What starts out as shiny and gold can turn to dark brown or green over time due to oxidation. With that said, there are sealants you can apply to help prevent this from happening. The tradeoff is increased costs and the time involved.

Aluminum Gutters

The selling points with aluminum guttering is their light weight and affordability. They are the most economical rain gutter option. Aluminum is not as strong as steel or copper, but they still hold up well to the different weather elements. Their biggest drawback is the maintenance involved. They require more frequent attention than other types of rain gutters.

Vinyl Gutters

Vinyl gutters provide you with a system that is lightweight and virtually maintenance free. They also give you a variety of colors to choose from that other gutters do not. The drawbacks to them are their lack of strength and the fact they are subject to the effects of hot or cold weather.
